

Compliance Review Report - Procurement And Vendor Documentation

The reviewed batch shows a documented procurement process, but the current evidence is not sufficient to support a clean compliance conclusion. The main gaps are missing approval trails, incomplete vendor due diligence support, and inconsistent contract exception records.

Company	Atlas Servicios Corporativos S.A.
Review batch	Procurement Batch 2026 Q2
Report id	TCRIA-CR-2026-07-001
Generated at	2026-07-12 15:30 BRT
Review rules	Corporate Procurement Compliance v1
Business area	Procurement and Vendor Management

Executive summary

Metric	Value
Documents reviewed	47
Critical findings	2
Relevant findings	4
Informational findings	3
Overall status	Attention Required

Immediate priorities

- Recover approval evidence for contracts signed above the delegated threshold.
- Complete vendor due diligence support for suppliers marked as strategic.
- Regularize exception records linked to emergency procurement requests.

Analysis scope

Review of procurement and vendor management documents related to contract approvals, vendor onboarding, and exception handling for the second quarter of 2026.

Source	Uploaded batch from procurement shared drive
Document types	contracts, approval forms, vendor onboarding files, exception memos, email exports
Business area	Procurement and Vendor Management
Period covered	2026-04-01 to 2026-06-30

What was checked

- approval trail completeness
- vendor due diligence support
- exception justification records
- contract conformity against internal thresholds

Applied review rules

The review rules classify findings by evidence completeness, traceability, approval support, and conformity with documented procurement controls.

Severity scale

Critical	Evidence indicates a material compliance gap requiring immediate review.
Relevant	Evidence indicates a meaningful control weakness or unresolved conformity gap.
Attention	Evidence suggests a moderate issue that should be clarified or regularized.
Informational	Evidence indicates a point worth tracking without immediate escalation.

Main findings

F-01 - Missing approval trail for high-value contract amendments

	Critical	Noncompliant	High
Compliance area	Approval Governance		
Severity	Critical		
Conformity status	Noncompliant		
Confidence	High		

What was identified

Three contract amendments above the delegated threshold were located without signed approval support in the submitted batch.

Why it matters

The absence of approval evidence weakens traceability and creates exposure to unauthorized commercial commitment.

Supporting evidence

- Contract amendment file AM-17 with no approval attachment.
- Approval index spreadsheet marks the record as pending.
- Email chain references urgency but not final authorization.

Recommended follow-up

- Retrieve signed approval records or formal ratification evidence.
- Confirm whether the contracts entered execution before approval closure.

F-02 - Incomplete vendor due diligence support for strategic suppliers

	Relevant	Partially Compliant	High
Compliance area	Third-Party Compliance		
Severity	Relevant		
Conformity status	Partially Compliant		
Confidence	High		

What was identified

Five strategic supplier files include onboarding forms but do not contain the full due diligence support referenced by the checklist.

Why it matters

Incomplete due diligence weakens evidence of onboarding conformity and reduces defensibility of vendor approval decisions.

Supporting evidence

- Checklist marks tax and sanction review as required.
- Three folders contain only summary forms without source documents.
- Vendor master sheet lists suppliers as approved.

Recommended follow-up

- Request the missing due diligence attachments from procurement operations.
- Confirm whether approval was granted with an exception process.

F-03 - Emergency procurement exceptions are documented inconsistently

	Attention	Inconclusive	Medium
Compliance area	Exception Management		
Severity	Attention		
Conformity status	Inconclusive		
Confidence	Medium		

What was identified

Exception memos exist for part of the emergency procurement set, but the rationale and approval pattern are not consistent across documents.

Why it matters

Inconsistent exception records make it difficult to determine whether nonstandard procurement steps were justified and approved correctly.

Supporting evidence

- Two memos use the standard exception form.
- One request is supported only by email language.
- No single register consolidates all emergency exceptions.

Recommended follow-up

- Create a reconciled list of all emergency exceptions in the batch.
- Verify whether each exception has a matching approval record.

Evidence reference register

Evidence id	Document	Reference	Why it matters
E-01	AM-17 Contract Amendment.pdf	Pages 2-4	Contains amendment terms but no attached approval support.
E-02	Approval Index Q2.xlsx	Row 118	Flags approval record as pending.
E-03	Vendor Checklist Pack.zip	Supplier folders S-04 to S-06	Contains missing due diligence attachments for strategic suppliers.

Unresolved points

- The batch does not confirm whether missing approval evidence exists outside the submitted scope.
- Two vendor files contain placeholders that suggest pending uploads.

Analysis limits

- The review is limited to the submitted document batch.
- No direct system-of-record validation was performed.
- Unreadable scans may hide additional supporting evidence.

Next review priorities

- Recover approval support for high-value amendments.
- Close due diligence evidence gaps for strategic suppliers.
- Normalize exception records and reconcile them against approvals.

Annexes

- Detailed evidence register
- Full document inventory
- Rule set reference
